

Position Title: Full stack Engineer

About us:

Qmarkets, a leading Innovation & Idea Management Software Company, is looking for a **Full stack Engineer** to join our amazing global team and work on a product serving over a hundred thousand users our company's global enterprise customer's base.

About the position (Description & Responsibilities):

As a **Full stack engineer** at **Qmarkets**, you will be responsible for developing enterprise grade SaaS product. You will be working on a range of technologies building our next gen product, while improving constantly the code and the architecture.

This position is perfect for engineers who wants to have a real impact on technology, code, and product wise, with growth and scale in mind. The position includes the development of many new complex components & modules, integration with existing libraries and platforms, performance and planning for a system that is used by extremely large companies.

As a Full stack Engineer, you'll be responsible for

- Demonstrate constant high standard in coding, architecture, and teamwork, while thinking on best practices.
- Participate in the full product lifecycle: planning, documenting, development, testing and handling production aspects.
- Proactively suggest improvements across the whole stack.
- Maintain our web application tech stack: PHP Drupal, Vue.js, MySQL, Redis, Docker, AWS and whatever else is required to get the job done.

What we're looking for

- 4+ years of software development experience.
- 2+ years developing in php.
- High experience in the full stack technologies and techniques.
- Experience in testing methodology & tools.
- Proven track record of handling end to end projects technically, standing in time.
- Excellent people and communicational skills
- Fluent in English (both verbal and written).

Bonus points for:

- Experience with VUE
- Experience with Symfony Components
- AWS experience.
